

## **Vision Statement for CRS Society Board Member Application: Manuel Sanchez-Felix, Halozyme Therapeutics**

My vision is to act as a catalyst for the integration of patient needs with scientific innovation within the Controlled Release Society, fostering a collaborative environment where academic excellence meets industry pragmatism. I am deeply committed to enhancing the synergy between these two realms, believing that it is essential for the continued success and impact of CRS.

As I look forward to the possibility of serving as a CRS board member, my goal is to solidify and expand the interface between academia and industry members. My career has been defined by my ability to operate at the dynamic intersections of groups where cutting-edge science is rapidly evolving. My work at Eli Lilly and Novartis, leading preformulation groups at the crucial juncture of discovery and development, has honed my skills in translating scientific advancements into viable clinical candidates.

I envision leveraging my experiences, such as the pivotal role I played in the formation and success of the Subcutaneous Drug Development & Delivery Consortium, to guide the CRS community towards innovative drug delivery solutions that prioritize patient comfort and healthcare efficiency.

My contributions to the CRS, such as organizing committees, co-leading workshops, and engaging in symposiums, have been driven by my commitment to articulate the voice of the patient within our scientific discourse. I aim to continue this work on the board, emphasizing the importance of clear communication of technical problems and fostering a community that embraces the diversity of thought and experience.

My dedication to Equity, Diversity, and Inclusion, as well as my support for Women in Science and Young Scientists, is a testament to my belief in a society that values every member. It is my conviction that by cultivating a diverse and inclusive community, we lay the foundation for groundbreaking advancements in drug delivery technologies.

In my potential role as a CRS board member, I will strive to build on these principles, creating a vibrant, inclusive, and innovative society. Together, we will advance the field of controlled release, always with an eye on serving patients and contributing positively to the wider society.
